

Girls in Security Operations (GiSOC) Bootcamp

Digital Forensics Investigation Report

By

Analyst: ALI CHINASA JULIET

Date: 6th December, 2025

Submitted as part of the Final Capstone Project for the Girls in Security Operations Bootcamp.

1. Executive Summary

Karen, a security professional seeking a new role, received an offer from a company named **TAAUSAI**. As part of their assessment process, she was asked to complete technical tasks. To evaluate her performance and validate the work she carried out, a forensic review was conducted on the provided disk image.

1.1 Tools Required

- FTK Imager
- Registry Explorer
- Kernel OST viewer
- sqlite3

To start the analysis, load the disk image into FTK Imager. The steps for adding the image are shown below.

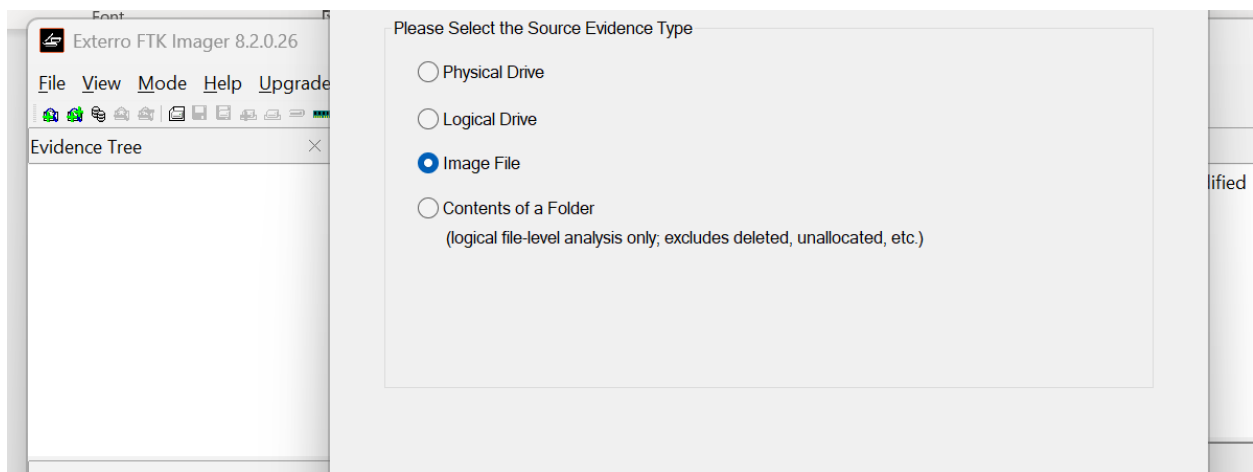

Fig1_ftk_imager

After adding the data source in FTK Imager, you can begin the investigation.

2. Questions Asked

2.1 What is the administrator's username?

Found in the SAM hive under user accounts, and confirmed through user profile folders in FTK Imager.

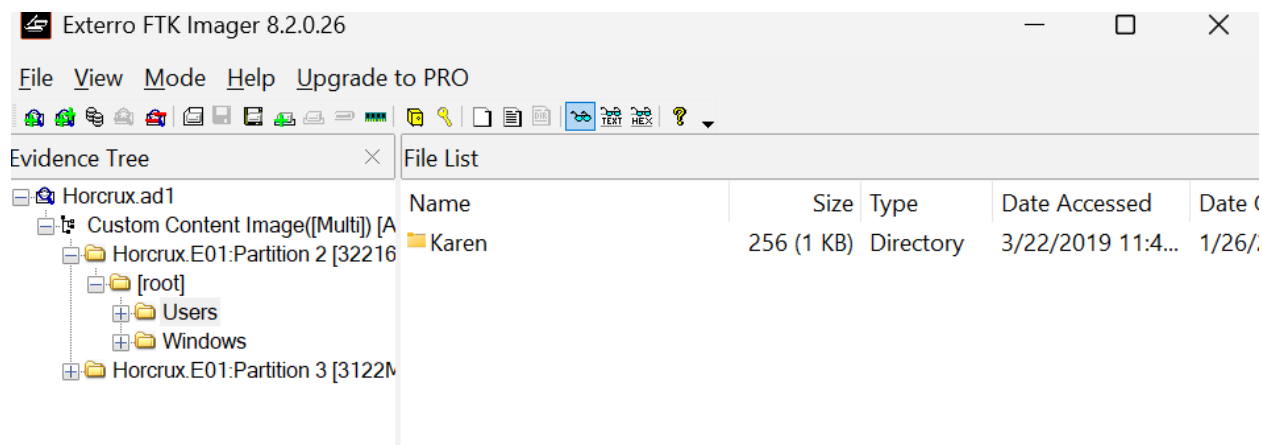

Fig2.1_administartors_username

2.2 What is the OS's build number?

Found in SYSTEM hive under CurrentBuildNumber key in Registry Explorer.

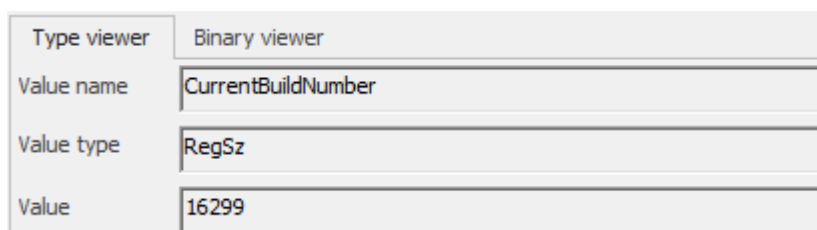

Fig2.2_buildnumber

2.3 What is the hostname of the computer?

Found in SYSTEM hive under ComputerName key in Registry Explorer.

Fig2.3_hostname

2.4 A messaging application was used to communicate with a fellow Alpaca enthusiast. What is the name of the software?

When examining the file in FTK Imager, we identified the messaging application as **Skype**.

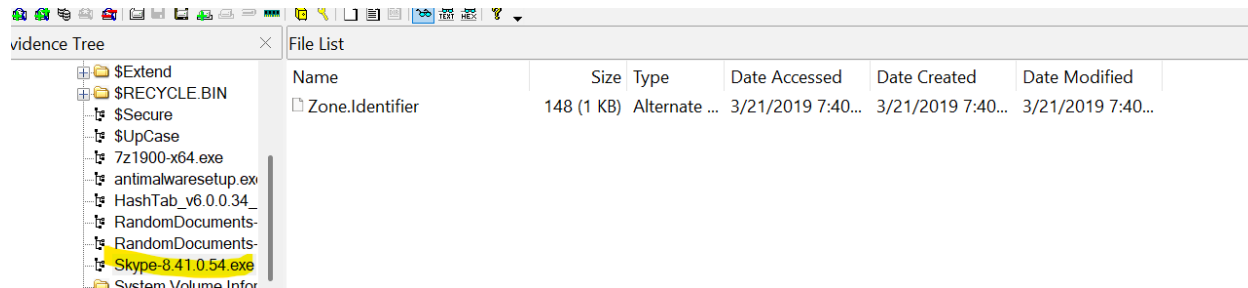

Fig2.4_messagingApp

2.5 What is the zip code of the administrator's post?

To determine this, we examined the file that stores browser data, named **Web Data**, and exported it using DB Browser for SQLite to extract the details.

PostingTitle	Job Needed, 19709	job needed, 19709
--------------	-------------------	-------------------

Fig2.5_zipcode

2.6 What are the initials of the person who contacted the admin user from TAAUSAI?

We exported the email address and used Kernel OST-PST to extract the emails. After reviewing the inbox, we identified the sender as **Micheal Scotch**.

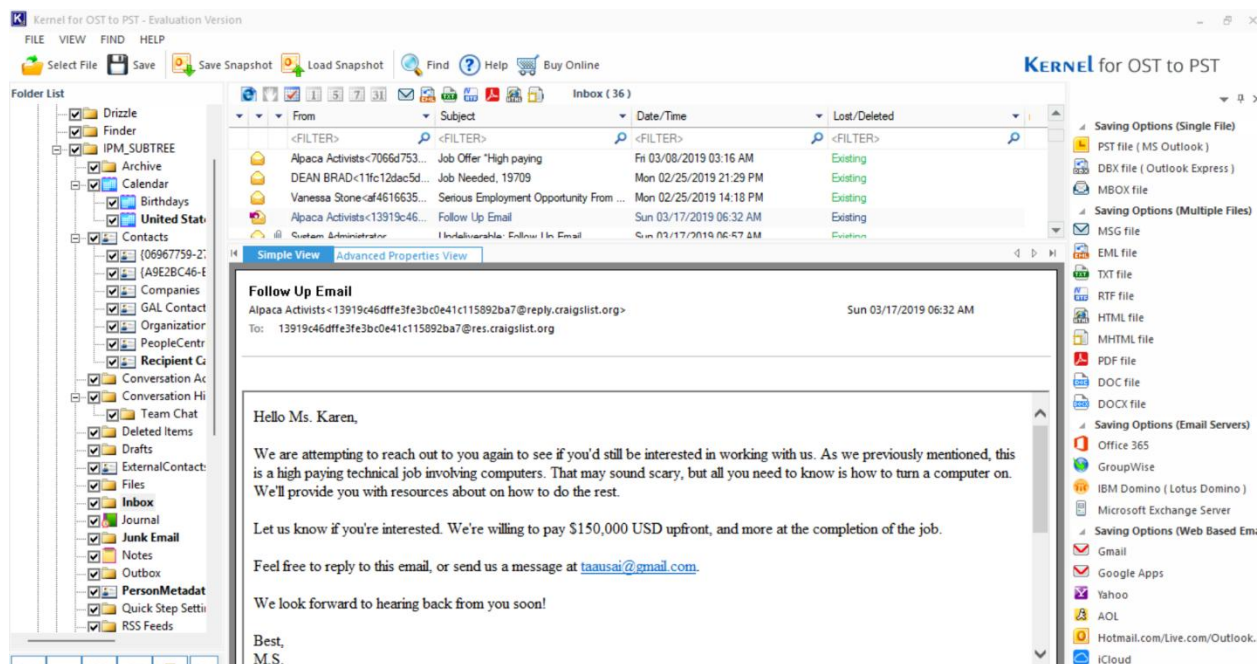

Fig2.6_initial

2.7 How much money was TAAUSAI willing to pay upfront?

We opened the email again and we found that TAAUSAI was willing to pay **\$150,000**.

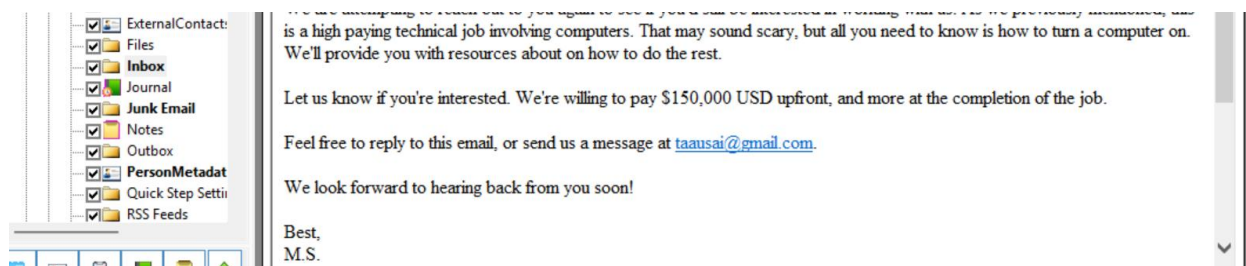

Fig2.7_pay_upfront

2.8 What country is the admin user meeting the hacker group in?

We checked the email of the OST export file ,After checking the email,I saw a coordinates which I checked on google and I found the location to be Egypt

What we need you to do is gain his trust and then hack his machine. We will give you more information about this in person. Meet us here "27°22'50.10"N, 33°37'54.62"E"

2.9 What is the machine's timezone? (Use the three-letter abbreviation)

we find out that the machine's timezone is **UTC**.

Fig2.9_timezone

2.10 When was AlpacaCare.docx last accessed?

To determine this, we accessed the **Alpacare.docx** file in FTK Imager and checked its Date Accessed property.

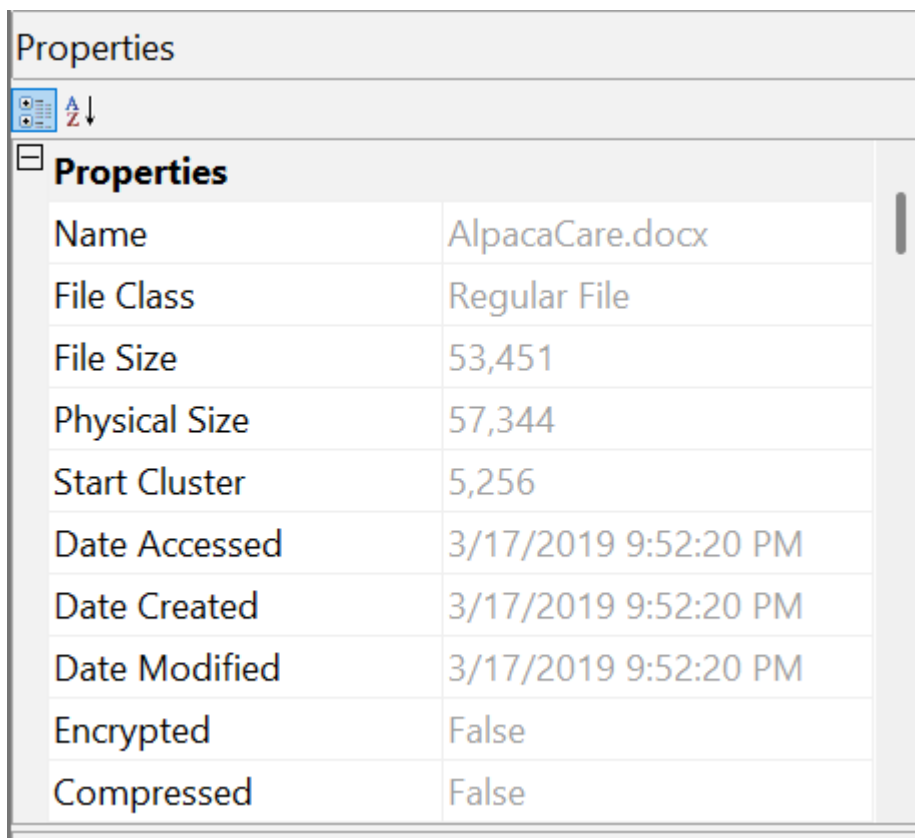

Fig2.10_Alpcare_doc

2.11 There was a second partition on the drive. What is the letter assigned to it?

Fig2.11_Patition_A

2.12 What is the answer to the question Company's manager asked Karen?

We opened the inbox of the email of the OST file exported.

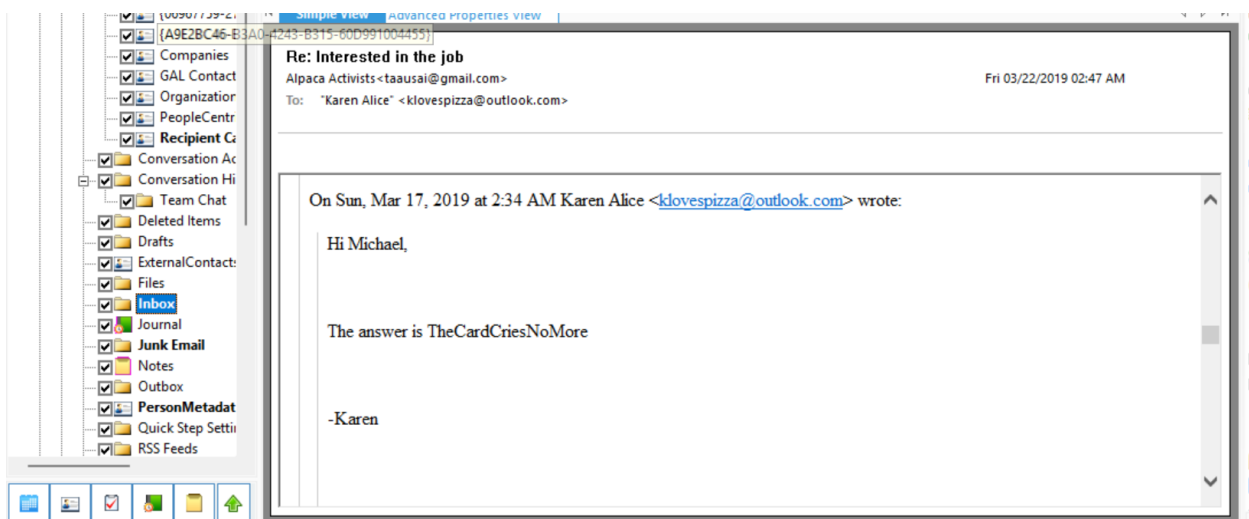

Fig2.12_questions_asked

2.13 What is the job position offered to Karen? (3 words, 2 spaces in between)

In the same inbox of the OST file exported, we found the job title.

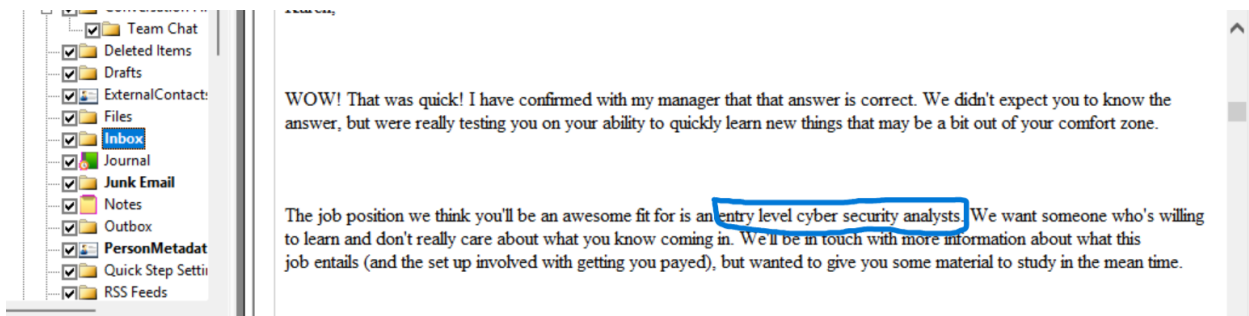

Fig2.13_job_title

2.14 When was the admin user password last changed?

I exported the SAM file and loaded it in the registry explorer and I extracted the details under doamins, then accounts and users.

2.17 What is the domain name of the website Karen browsed on Alpaca care that the file AlpacaCare.docx is based on?

we have to export the AlpacaCare.docx file & then analyze it
